Allowance of Application # 09/740,917

1. The following communication is in response to applicant's Amendment , received 22-September-2004.

Reasons for Allowance

2. The following is an Examiner's Statement of Reasons for the indication of allowable subject matter. The instant application is directed to a non-obvious improvement over the invention in U.S. Patent No. 6,545,549, issued to Swoboda. The improvement comprises a debug and emulation system, including: a target device embodied in a single integrated circuit, the target device including an operation circuit operating in synchronism with a function clock circuit, triggering a trace trigger circuit upon detection of a predetermined condition within the operation circuit, an oscillator clock which may be synchronized with the function clock or a reference clock, a FIFO buffer for receiving the trace data via a trace port, operating the trace trigger circuit and FIFO input by the function clock, operating the FIFO output and the trace port output by the oscillator clock, and an emulator coupled to the target device for controlling the clock selection. This patentable distinction is included in independent claim no. 1. The art of record, either individually or in combination, fails to teach, suggest, or render obvious the useful, concrete and tangible <operation of the trace all on the function clock or split between the function clock and the reference clock, wherein the trace data is sensed in synchronism with the oscillator clock> having the corresponding structure which is disclosed in the specification and equivalents thereof at least at page 16, line 2 through page 67, line 13, and Figures 1-13. In
